AutoCAD is a powerful and popular commercial CAD/drafting software application that was developed and marketed by Autodesk. Autodesk's goal is to provide designers and drafters with innovative tools to build, animate, and share their ideas. Before AutoCAD, most CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as a mobile and web app. Today, AutoCAD, among other CAD and drafting software applications, is used for drawing and editing freehand 3D models of buildings, diagrams, and industrial designs. Special features AutoCAD has many special features, some of which include: Feature animation Animation can be used to animate the object, such as a watch and compare them to the previous model. This can be used to create a series of animation to explain a drawing. Automatic plotting This feature enables the user to automatically plot a path to trace over the drawing objects in order to "save work", creating a vector image or "plotted" path. AutoCAD supports a variety of coordinate systems, including Euclidian, polar, azimuthal, and orthographic. The user can specify any point or path by clicking. If the distance between the points is 1 mm or larger, the cursor is automatically displayed. The coordinates of a point on the drawing surface can be dragged and dropped to change the coordinates. The user can set the layer and color of the object at each a1d647c40b

The Aeroscraft achieved vertical, short takeoff and landing (V/STOL) flight at the Test and Training Center at Holloman Air Force Base, New Mexico, Dec. 7, according to the Pentagon's Air Combat Command, which is in charge of the experimental jet. It's the first flight of an Aeroscraft on an operational base since the program's inception in 2014, Capt. Spencer Williford, Aeroscraft program manager, told an audience in a teleconference with reporters. "We got her vertical and flew her back to the ramp, and then flew her across the runway and landed on the opposite side of the runway," Williford said. The stealthy Aeroscraft, or "black flash," got airborne at about 9:17 a.m., taking off about 400 yards from the runway at Holloman and landing at 9:33 a.m. Williford said that's on par with normal takeoff performance. "The test team was really happy," Williford said. "We wanted to get the aircraft up, execute a mission, and then get it back to the runway to be able to load up the aircraft and be ready to go for the next test." The successful V/STOL flight tested the Aeroscraft's ability to fly short distances at high speeds, Williford said. "We were able to pull up to a high speed, maintain a high speed and then turn around at the peak and go back to the ramp," Williford said. "The next part of the flight will be going to a higher altitude, then pulling up and slowing back down to the runway." The Aeroscraft is the third of a family of advanced, jet-
