Interleukin-4 secreted by dendritic cells: mitogenic and weakly immunosuppressive. In mixed lymphocyte reactions, dendritic cells (DC) stimulate allogenic T-cells more efficiently than professional antigen-presenting cells. The aim of this study was to establish if any cytokine secreted by DC could in itself induce T-cell proliferation. We show that DC were able to release high levels of the Th2 lymphokine interleukin-4 (IL-4) into the supernatants, and secreted low levels of tumour necrosis factor-alpha and IL-12. These supernatants stimulated the proliferation of lymphocytes. They induced a more potent proliferative response than other supernatants, suggesting that the proliferative response induced by the supernatants of DC may be through the release of IL-4 by DC. The weak capacity of the supernatants of DC to modulate proliferative response could be due to the lower concentration of IL-4 they released than that of other Th2 cytokines. Tumour necrosis factor-alpha secreted by DC did not modulate T-cell proliferation. Development and validation of a hepatitis C virus genotype 4 assay in the USA. Hepatitis C virus (HCV) genotyping is important for predicting response to antiviral therapy and infection control. In this study, we developed and validated a HCV genotype 4 assay with a clinical sensitivity and specificity of >90% and reproducibility of >91%. A patient's (n=2034) genotype was determined using a multiplex assay consisting of primers and probes from the 5' untranslated region (UTR) and NS5B regions of HCV. A 603-nt-long fragment was amplified by nested PCR, sequenced using an ABI3730XL, and genotype was determined using Blast (NCBI) software. When five well characterized samples were each tested by all five assay methods, the Genotype 4 reference material was 100% identical to the Genotype 4 sequence by all five methods. Six patient specimens were tested from five laboratories using the multiplex PCR/sequencing. Results were 100% concordant for all five methods. The multiplex assay is the first sensitive and specific test for HCV genotyping in the USA. D.I.Y. Glass Fencing If you're in the market for fencing but have
