I'm relatively new to working with Eloquent, and i'm having trouble understanding how to properly query an attribute through an object that has a relationship to that attribute. Here is what i'm trying to do: A contractor object namespace App; use Illuminate\Database\Eloquent\Model; class Contractor extends Model { public \$incrementing = false; protected \$fillable = ['name', 'active', 'projects']; public function task() { return \$this->hasOne('App\Task'); } } A task object namespace App; use Illuminate\Database\Eloquent\Model; class Task extends Model { public \$increment

Pokkiri Tamil Movie Hd Free Download

Pokkiri (English: Pokkiri) is a 2007 Indian Tamil action-comedy film co-written and directed by Puri Jagannadh and produced by Dasari Narayana Rao. The music and soundtrack were composed by D. Imman. The film was released on 24 July 2007. Pokkiri is a remake of Puri Jagannath's Telugu blockbuster, Pokkiri . So far, I have written the following: biggest = 0 if answer is not "done": a = raw_input("enter a number: ") if len(a) == 0 or a > biggest: print biggest However, when I run it it gives me this error message: NameError: name 'biggest' is not defined I am using python3.4 by the way. Any help will be appreciated. A: You need to define the biggest and call it inside your condition. biggest = 0 if answer is not "done": a = raw_input("enter a number: ") if len(a) == 0 or a > biggest: print biggest biggest = input(" f30f4ceada
