The metafile is pretty simple to create (if you need a guide how to do so, there is one available here) and can be loaded on a sheet of any Excel file. package com.mycollab.module.user.view.search; import com.mycollab.module.user.domain.RolePermissionRelation; import com.mycollab.module.user.domain.UserRolePermission; import com.mycollab.module.user.vo.RolePermissionVO; import com.mycollab.module.user.vo.UserRolePermissionVO; import com.mycollab.module.user.vo.UserRolePermissionVO; import java.util.List; /** * @author MyCollab.com * @date 2015-12-21 */ public interface UserRolePermissionSearch { List listByUserIdAndPermissionId(Long userId, Long permissionId, Long groupId, Long companyId); UserRolePermissionVO save(UserRolePermissionVO userRolePermission); void saveUserRolePermissions(UserRolePermissionRelation relation); boolean addUserRolePermissionsRelation(UserRolePermissionRelation relation); boolean removeUserRolePermissionsRelation(UserRolePermissionRelation relation); List
