"The sound of this game is like Christopher Walken whispering in your ear. A lovely, hilarious, extremely well-written experience... For over a year, I've been debating just what it is I want to make. I wanted to make an RPG where you can be a hero. I wanted you to be able to interact with the world, to be able to make choices about how you experience the world. I wanted to create something that is just as wonderful, as much fun, and interesting as what I enjoyed most in my life. Something that felt just as important as the people I love. Something that will make me think about the choices I am making in my own life. Overland is that game." - The creator of Canabalt, Night in the Woods

Hang tight to the edge of your seat as you fight, pick up, and deliver the stranded to safety...or be sure to avoid the hazardous situations you can't help. In the Overland community, you're connected to other travelers on this road trip, and the world. You're connected to your people, and your past. You, too, can add Overland to your list of games to play: [Facebook](#) | [Overland Website](#) | [Twitter](#) | [Instagram](#) | [YouTube](#) | [Tumblr](#) | [Reddit](#) | [Vine](#) | [Spotify](#) - More Info:

**30 November 2014 Every IGN Ass-Kicking is the same. They ask you to kill it with fire. Then go kill it with water. Then go kill it with lead. Then go kill it with a rock. Maybe you waste time bragging about how you're going to kill it with fire in the comments section. Then IGN tells everyone to make sure to kill it with fire. Pffft. If it's fire it doesn't mean shit. You could kill it with any kind of fucking destructive force. They don't care. They just tell you to use Fire this time because they're assholes. When IGN tells you to kill it with fire, it's usually in the form of a simple sentence like, "Team Ragequit should kill this." It lacks the narrative flair of, "Harbinger should kill this." We don't get all huffy and think we're the best in the comments section about how this should happen because it "would bring a certain justice to bear upon the party members that played poorly earlier in the game." No, we just kill it with fire because this is what IGN told us to do. The murder mechanics of Mass Effect: Andromeda aren't nearly as creatively vast as traditional RPG style attack systems. You have four basic special abilities to choose from. All they do is increase damage from specific types of attacks. Your base weapon damage is the best, including weapons from the Armory. Special abilities generally have some kind of stat increase for a set time. Power is long-lasting. Rage boosts health, increasing the over all health pool of the entire party, including Andromeda. This is interesting, because it lets you take hits that would otherwise stagger or kill you, and mitigate the risks. It's not super useful. That's why I use it the least. Blast: And I kill it with fire. Blast is very similar to the other special powers. It's a passive power that's nice if you're familiar with its effects. As a melee attack that ignores parry, your attacks are supercharged against enemies when you used the ability. Like all the other powers, you can use it when you charge, punch, slide, vault, or shoot. This is pretty standard between the combat styles. These powers are a welcome contrast from the passive**
