The rifiuti2 command-line tool is a command-line tool you can use to analyze Recycle Bin files. It reads the deletion time, original path and size of a deleted file, and lets you know if it was ever restored from the trash bin. Under normal circumstances, this operation is automatically carried out by the operating system in forensic tasks. It offers support for various types of Recycle Bin formats since Windows Vista until Windows 10, older OS editions such as 95, NT4 and ME since 0.7.0, 32-bit and 64-bit architecture types, along with all localized versions of the operating system, including those based in Unicode (newer) and ANSI (legacy). Information is saved in XML and tab-delimited CSV format. The usage is rifiuti2.exe [OPTION.] INFO2, where INFO2 represents the output file with extracted information about the Recycle Bin. As far as options are concerned, you can change the tab delimiter into a custom string for the CSV file (-t, delimiter=STRING), hide header information (-n, --no-heading), instruct the utility to always show the result in UTF-8 encoded format (-8, --always-utf8), write the output to file (-o, --output=FILE), change the output to XML from CSV (-x, --xml), show the legacy (8.3) file name if available and specify its CODEPAGE (-l, --legacy-filename=CODEPAGE), indicate the present deletion time in the system's time zone, default is UTC (-z, --localtime), as well as print version information and exit (-v, --version). rifiuti2> help rifiuti2 [OPTION.] INFO2 rifiuti2 reads the deletion time, original path and size of a deleted file, and lets you know if it was ever restored from the trash bin. The following is an introduction to rifiuti2. 1. rifiuti2 is originally a tool developed by William Wang to analyze the output of Recycle Bin Explorer by Regin. The utility is designed to be a complement to his Recycle Bin Explorer program. 2. It also processes Recycle Bin Explorer by Regin's.rcbinf2 files. Now Recycle Bin Explorer by Regin can not analyze the Recycle Bin files that are produced by Recycle Bin Explorer by Regin. 3. At the same time, it can analyze the Recycle Bin files created by the other Recycle Bin utility, Windows Explorer Recycle Bin. 4. When analyzing the output of Windows Explorer Recycle Bin, rifiuti2 can automatically detect the Recycle Bin file format that it encounters and generate a customized version of Recycle Bin Explorer by Regin for that file format. 5. When analyzing the output of Regin (Recycle Bin Explorer by Regin), rifiuti2 can automatically detect the Recycle Bin file format that it encounters and generate a customized version of Regin for that file format. 6. You can choose to use the

customized version of Recycle Bin Explorer by Regin to analyze the files. 7. If you want to use rifiuti2 to analyze the output of Recycle Bin Explorer by Regin, you can download the customized version of the rifiuti2 program. 8. rifiuti2 has been translated to more than 20 languages. 9. The rifiuti2 program is designed to be compatible with all Windows operating systems, including the older ones (Windows 95, 98, NT, ME, CE, 2000, XP) and newer ones (Vista, 7, 8, 8.1, 10). 10. rifiuti2 was designed to be usable at both Linux and Unix servers, in conjunction with the corresponding types of Recycle Bin. 11. rifiuti2 is an open-source freeware utility for Windows, that means it is free to use. 12. rifiuti2 can read all types of Recycle Bin files in the Recycle Bin, including the.rcbinf2 files. 13. Based on its advanced processing techniques, rifiuti2 provides rich information, such as the name and size of the files, and information about the permissions, such as the owner of the files or the existence of hidden and system files. 16. If you want to use
