Spyware has been an unavoidable part of the Internet age and a nuisance for its users. The majority of people have some kind of mild form of spyware on their computers. Is Spyware actually a threat to your computer and is it really worth getting rid of it. The answers to these questions can be found in this article. What is Spyware? Spyware is a term used to describe a software program that monitors your computer use and even your Internet activity. A spyware program typically has some form of advertising on your computer and on the Internet. They can collect information about you and send you advertising based on your Internet activity.

Most of the spyware programs on the Internet are usually very easy to install. Spyware is usually bundled with other software that you might be installing. This makes it easy for the spyware to get installed on your computer and for you to miss it. Advertising Most spyware programs will create a fake file on your computer that will direct your web browser to another site. These sites will offer you free applications or advertisement. Some spyware programs will install spyware on your computer on a daily basis. Spyware can often be found being downloaded from the Internet. The easiest way to prevent yourself from getting spyware is to only download files from an established website. Spyware is very easy to get rid of. The simple thing to do is to delete the file on your computer, which can be very difficult due to the fact that your computer has multiple windows open. Here are the steps to remove spyware from your computer: Double click on the "regedit" icon. Select the HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run\ from the drop down menu. Note: This is a hidden folder, so it will not be displayed on your computer. Search for a "Run" file with a name that startswith "spy" and delete the file. This way you will remove spyware that you have downloaded. Is Spyware Really a Threat? Spyware may be easy to get on your computer, but is it really a threat.

The internet is filled with information about hackers and spyware, and I think that most of that information is out of date. The only threat that spyware is to you is that it may damage your computer. Spyware is one of
