So here we are -- the first true. and it is simple to use with parallel ATA cards. This controller was designed with the modern computer in mind, not being.boming fly A boming fly is a small, light, rubber-tire-powered helicopter used on smaller buildings or structures, such as industrial buildings, residences, and light commercial or military structures, for precision survey, inspection, monitoring, or transmission of data between a remote location and a receiver. This type of helicopter consists of a relatively small aircraft with a suspended carrying system and a balloon. The aircraft lifts a transceiver or data logger into the air. The transceiver or data logger transmits collected data back to the base station which is typically ground based. The data transmitted from the airborne transceiver can be transmitted in a variety of ways. These include X-band, Ku, and Ka-band, frequencies. Booming flies are useful for conducting surveys and maintaining a constant connection between a remote location and a receiver. They also facilitate the transmission of data to a central facility or points of interest. Booming fly like any other aircraft are controlled using similar safety and flight procedures. The aircraft is flown by the pilot with the use of a side stick that is rotated using controls similar to those of a conventional helicopter.
