
[FS2004] Carenado Cessna 208 Caravan Download |LINK| For Computer

The interior is in stock standard business fashion and has been well tried and tested, it is very easy to fly and has a large usable cockpit. As you have seen in the left image the Cessna does not have an illuminated instrument panel, instead there is a dark slatted instrument cluster with a flashing stand-by light. It would be nice to have a DAY and NIGHT cockpit illumination, but there is no such feature, instead there is an illuminator switch on the panel next to the electronic stand-by light. The Caravan has a Lighted instrument panel with a standard head up display (HUD), the view is updated in real time and a couple of preset views are possible, it can show yaw, pitch & roll and a black and white map.

The standard view is good, but if you want more features there is an upgrade available, called the iSight, and there are a few other ways to make the display better. It is possible to change the default view, but is not the easiest thing to do, but it is now possible. It won't be too hard to do if you read the manual. The Caravan has a standard full panel of switches and the usual Brake selector (not in v2 though). The high fuel tank is a v1 feature that some people don't like, The cabin pressurisation is optional and for most people it is not needed as the pressurisation is standard on all Carenado aircraft. If you need pressurisation you must first press a button to move a panel on the left hand side towards the centre and the door to open, which when closed will open the pressurisation door. As you know there are lots of switches on Caravan and the Carenado is a cargo aircraft so the outside has lots of doors. The welcome light is on top right and the note is printed on the little hatch in the middle. This is the perfect airport vehicle, It has a nice 3rd (rear) hatches, a lot of useful cargo bins and it needs only a short runway of 2240m or so to take off. There are no windows on this aircraft so it is great for a home airport. The Caravan may not be the fastest car in the air but it is one of the best for dogging. The engines auto-cut out at a certain RPM setting that is set in the ECU, around 6000 RPM. So you can take off with a high throttle and it will cut out smoothly and back into idle. However, I found because of the Pilot Knob, the engine RPM is not fully on the ground, so you have to be more careful with the gear and with the throttle to make sure it does cut out completely. There is a real simple version of a twin jet with the 3x2 layout, but the plain twin Turbos are not really strong in the air, it is a good introduction and the stock engine should provide enough power to get you started, but in the long term you will want to fit the bigger engines that Carenado offers. The standard system is quite different to the standard twin jet aircraft. This is one of the first modern Caravans, with the slightly sloped wings and the single jet T33 engine. The other feature is the very old (I think? was the first) Allison T33-A35 engine that is very strong. A 2JT version is

also available, with 2x2 layout. The standard single engine is only 600hrs and this version can be bought with all the extras, but the 2JT is a bit of a different beast and is fully loaded in the shop with all the extras. Although its not economical.

[FS2004] Carenado Cessna 208 Caravan Download For Computer

The HSI and other panels are the same as the Grand Caravan, but “sans” the Scaled additions. This is probably the area where the greatest amount of work has been invested, and certainly makes C208B a more unique aircraft in this regard. Sound is a nice stock arrangement with a great sound menu. Current conditions are all normal Navaid modes plus a few extras, and over 40 G AN/AAS-39 type AHS zones – the Grand Caravan has all of that and a lot more. Smooth operation of the aircraft is an exercise in serenity. The control feel is very good and all the important controls are nicely functional. The Cessna-style pedals are not the industry standard dual axes and are a little shorter, but the nonstick rubber footplates are really comfortable. The control stick is a real tight turning radius and makes good use of the adequate 2.4 FSR. The aircraft is nicely balanced as it responds when at the limit of the extended flaps. In flight feel is perfect, with perhaps a slightly heavier rudder. In descent the aircraft is very nicely balanced and I had no trouble landing it on almost any runway. Takeoff is as good as it gets. Ground handling is pleasant when taxiing, and once airborne you have a very smooth ride in a surprisingly quiet aircraft. Brakes are excellent and smooth. Landing is a breeze. There is not a single thing that does not work properly, no matter how hard I tried. No need for a constant commentary like “push and pull, pull and hold”. Everything is there and works in exactly the right way. (All exceptions are explained.) Everything is simple and direct. Fuel consumption is really excellent. Weight is correctly displayed, and I managed to run it out of reserves (with a full tank) to 201 KIAS. Mission Plan included is basic and simple.
