Password Remover Deep Freeze 722

I have a Lenovo T400 (T420) from a February 2013 purchase. Lenovo installed a bunch of crapware on it that is easily removed. I have a root partition with 4.7GB and a swap partition of 1.3GB. I originally had Deep Freeze installed, but deleted it. I re-installed it, but it will not allow me to use a password. Finally, if you havent activated Deep Freeze and typed your login Password, you will be presented with an warning dialog. Deep Freeze prompts you with the choice to either exit and restart the computer, or allow Deep Freeze to unblock you. Deep Freeze is a feature that lets you customize the behavior of Windows so that when you sign in with your password, you see a custom page instead of the standard Windows Login page. You choose the image you want to show when you sign in, the background image, the desktop wallpaper and the wallpaper for your taskbar. You can also set Deep Freeze to display a warning message. The defaults are designed to keep your system secure and prevent you from inadvertently accessing unlicensed software. Your options include: The amount of bandwidth needed to accommodate this feature varied, depending on the number of computers being monitored and Deep Freeze's version. Deep Freeze also monitors other general system parameters such as hardware-related settings, software installation history, and operating system and application updates. Deep Freeze stores the password associated with a restricted component and prevents the component from running unless the user successfully types a new password on the first attempt to access the component. 5ec8ef588b
