Lightroom 5 is a major update with the main focus being to improve performance and make it easier to work with images. In some respects, this is a complete re-write, and there's a lot to get into. Here's what I found when I started to work with the new version of Lightroom 5. Lightroom can also now be used for people who want to make a video tutorial. But once you've shared a document, you can collaborate in real time with others. They can take a stab at the design, make small changes, and even send the file back to you with comments for further review. Review features include color and design lock; face and hair pickers; comments highlighting; comments in the margins; merge existing comments to a specific location; document history; and a new Share for Review method that files as physical copies if they're shared.

Photoshop is the only major Photoshop competitor that has robust support for the chemical based in-camera correction techniques out of the box. PhotoPills is a powerful online photo-editing platform with the power of Photoshop's editing tools and the accessibility of apps for mobile devices.

PhotoPills has robust support for the latest-generation Apple Cameras as well as the older iPhone 5S, in addition to a number of 3rd party camera platforms. Neat but advanced features in Photoshop are available only in the full version. The freebie features would only offer some simple editing capabilities such as basic masking and adjustment. Many visual effects require you to do some heavy tweaking and sacrificing time in order to get a result.
