In Lightroom 5, you have a finder-like view in your window, as opposed to the large window present in previous versions. Now we have the view of the whole image in the Finder, so to speak. You can zoom in and out as well as pan around the image with a simple click. As I mentioned, the left side toolbar is now redesigned. Most notable in the change in the Export process, which is redesigned in its entirety. So now it is easier than ever before to optimize images. In fact, exporting single layers to a new document and then combining the layers is even easier. The Import process has been switched too. And while I am talking about what has changed in the Import process, here is something equally important: you can now edit multiple files at once in the folder view. Photoshop also includes a new, improved view called the History view. It updates with every change you make. You can edit any single file in the History view and see all the changes you made in real time. Though it's largely an update to Creative Cloud services like Photoshop, Lightroom and InDesign, Adobe Photoshop Elements has plenty of unique features of its own. Take a look at the full list of changes to come out with this update. The first and most obvious change is that Elements now works with apps native to the iPad (e.g. Apple's Photos and iMovie). It also offers a more powerful touch interface than the previous Elements (2021). This version includes mobile editing apps like Photoshop Sketch and a new "My Paints" section for creative projects, which now includes drawings made with a pencils with the brand-new Apple Pencil.
