You don't need anything more than a WiFi connection to use Elements. After downloading the update, just move your photos and you're set to go. At this point, it's plug and play, but if you need any type of custom functions, like batch processing or a color corrector, you can import images from Lightroom or Photoshop as well. While you could edit the same image with two different editors, it's much more convenient, safe and time-saving to choose Elements to edit, then use any of the other software listed on the next page as a back-up!
