When you physically hold the iPad in your hand to use Photoshop Sketch, you get a visceral sense of how it should feel on the device. It's easy to adjust your work space while you're using the device and the Pencil is extremely responsive. You can quickly point at a spot and move a corner to adjust the canvas size. It's easier than adjusting on the desktop version because you don't have to move your mouse around. The reason I named the iPad Pro review the Apple's Magic Pencil is precisely because—with the iPad Pro and the Apple Pencil—as a tool for creative professionals, it's a magic pencil that fits with our workflow and gets our work done. The cool thing is that this version of LR is available to all the suites, even for free. I would have no problem paying \$50 to get the same feature set as the "paid" version. But \$50 for an update is a bit steep. I did some testing using 6.0.4 and still have the key missing but I'm glad you've responded to this. I have really discovered how difficult it is to find this particular bug on my own. I just have the ultra old Mac I was using and the new one is set up for Windows (X2). I thought I had it figured out but maybe I didn't. Thanks again... Fantastic solution Adobe! It's easy to see the filetypes. Not only mouse-over, but true black and white when you're working on a swatch. Very happy with this update. Also, now that we have 5, any available in settings for "Developer Mode" I routinely save to the Preview PSD. Small, but a big plus for me. It doesn't open in the viewer, but the comments are visible to me, cueing me to prepare to submit for approval, then I save the finalized file to my main desktop and know exactly what to see for final edits.
